

ABSTRACT

5 A printhead assembly is provided comprising at least one printhead module comprising a unitary
arrangement of a support member, at least two printhead integrated circuits, each of which has nozzles formed
therein for delivering printing fluid onto the surface of print media, at least one fluid distribution member
10 mounting the printhead integrated circuits to the support member, and an electrical connector for connecting
electrical signals to the printhead integrated circuits, and a casing in which the printhead module is removably
mounted. The support member has at least one longitudinally extending channel for carrying the printing fluid
for the printhead integrated circuits and includes a plurality of apertures extending through a wall of the
10 support member arranged so as to direct the printing fluid from the channel to associated nozzles in all of the
printhead integrated circuits by way of respective ones of the fluid distribution members.
